

Industry 4.0 in 3D

Add Real-Time Data To Your 3D Models

Add real-time data to your 3D models with photo-realistic digital twins and advanced visualizations.

Key Features & Benefits

✓ On-site/off-site collaboration with experts

✓ Track worker locations and generate safety status alerts

✓ Create virtual videos of incidents for insurance/regulatory reporting

✓ Execute time and motion studies in 3D

Increasing Safety

IoT platform agnostic (including SAP and Ignition)

Simplify maintenance, reporting, and triaging

Use photo-realistic 3D models as an intuitive industrial IoT user interface

Rich collaboration environment with on-screen drawing, chat, and video

Augmented Reality (AR)

Decreasing Cost

Pull all relevant data sheets and maintenance records directly from your models

Add new animations and visualizations to an existing 3D model

Display live IoT sensor data and retrieve asset management records with a click

Animations include a translucent mode, exploded engineering views, and volumetric heat maps
